### 4. Kalocsa-Baja Line

Orders have been issued by the Minister of Mail and Communications for the construction of a new railroad line between Kalocsa and Baja, to be started in 1955.

### 5. Shunting Engines from Poland.

The return of the thirteen 377-type shunting engines at present in Poland has become urgent. The MAV has taken over the internal shunting service in the Diosgyor works and is henceforth to be responsible for the same service in Ozd. These engines, although 50-70 years old, are useful and perfectly adequate for work in a small radius and arrangements are being made to send an engineer to Poland to insist on their return.

### 6. Repairs of Polish Railroad Cars.

In connection with the complaints made by the MAV about splits in the springs of the railroad cars supplied by Poland, a delegation of two members of Metalexport, Warsaw, has arrived in Hungary, and has arranged without argument to replace all 4,000 springs on the first consignment of 1,000 railroad cars.

### 7. Shortage of Tank Cars.

An unspecified number of tank cars have been hired at the rate of \$ 15 per day per 20-ton car.

#### 8. Railroad Air-Raid Shelters.

Construction of air raid shelters in railroad station areas is completed, and no further constructions are being started for the time being. Training of personnel continues, however.

# 9. Coal Stocks.

25X1

25X1

25X1

Coal stocks have improved considerably since the beginning of March 1954, owing to improvement in weather conditions. The quality of the coal however, has not improved, and Deputy Minister Jozsef Priezzol remarked recently, during a conference to discuss the Zalaegerszeg peat-pakura mixture installations program, that the manufacture of this type of fuel must continue for a long time yet, since the coal supply was expected to be even worse next winter! Present reserves amount to 3½ days' operation.

# 10. Budapest Subway.

The 1954 budget allocates 60 million forints to this project. This sum is intended for necessary maintenance and administration only, since the whole work was stopped and almost completely dismantled. The subway now comes under MAV, which has taken over all stocks and equipment, and is using them for its own purposes.
